How to Assemble the Portable Green Screen Stand

The stand requires 4 pieces altogether, including sheet

Untighten bottom screw to release stand legs

Pull center pole upwards to open stand legs

Tighten screw again to secure stand legs in place

Untighten other screws to make stand taller

It should look like this!
Loop sheet hole through black pole

Place the black pole on the two silver stands

Holes in black pole should fit nicely into silver stands – make sure screws are untightened

Once black poles are sitting on two stands, tighten each side firmly to secure in place

End result: portable green screen!

**Reminders when finished:**
1. Shrink down stands and pole
2. Tighten screws
3. Fold up sheet in neat square before placing back into bag
