Echo360 - Using Classroom Tools

After you click on a Class from the class list, you can use the classroom tools to interact with the class media. The toolbar is only available when the video is published to a course.

Classroom Toolbar

Most of the items in the Classroom Toolbar are the same for both instructors and students but there are a few differences. Students, for example, can take notes and bookmark content for review and study later; instructors/teaching assistants cannot.

The Top Bar of the classroom contains the following information and tools (hovering over each also provides a label in case you forget):

- The **Class Name and Date** appear in the top left of the Classroom window.
- The **double-balloon or conversation bubble icon** opens the Discussions panel to the right of the media view, allowing you to view any questions or comments, and to respond or ask your questions as necessary. Instructors can also use the panel to monitor class discussion.

  ![Discussion Panel](image)

- The **balloon icon with the plus sign** opens the Discussions panel but with a New question entry box open and ready for input. This is the same view you would get if you clicked New Question from the top of the Discussions panel while viewing posted comments.
• The **flag icon** is for **marking confusion (for students)** or for noting that a location or slide has been marked as confusing (for instructors).

• **Instructors and Teaching Assistants** will see this flag with a notification dot if any students have marked that location or slide in the classroom as confusing. **Confusion flag locations** are also listed with the **Course Analytics**, along with links to the media locations that were flagged.

• The **speaker-with-page icon is the Transcription icon** and opens the **Transcription panel for the class**. This icon only appears if the video has been transcribed, which is automatic when a video is published to a course.

• The **list icon** opens a **class list tray** listing all the classes in the section, allowing you to **switch to a different class** without exiting out to the main Class List.

• The **Course/Section name** in the top right corner exits the classroom and returns you to the **section Class List page**.
Classroom Playback Bar

The Classroom playback bar, located at the bottom of the classroom, is identical for students and instructors and contains all the controls necessary to control video playback as well as closed captioning and classroom media layout options.

The left side of the playback bar controls the playback of the video itself, while the right side of the bar contains additional controls for playback and viewing. These controls are listed below in the order they appear from left-to-right.

- **Playback Controls**: these include the standard **play/pause button, fast forward**, and **rewind**. Each click of the forward/rewind buttons moves playback 10 seconds in either direction; click and hold to scrub through playback. You can also **click on a location in the playback timeline** to move the playback to that location.

- The **video timestamp**, located immediately to the right of the Playback controls, shows the total length of the capture/video, the current location in playback, and the currently showing slide if applicable.

- The **video view heatmap button**, located with the tools on the right side of the Playback bar, toggles on/off a graphical overlay that provides a "viewing heatmap" showing which portions of the video have been viewed most/least often by users in this section.
• The **volume control button** allows you to change the volume of the playback, including **clicking the icon to mute** the playback.

• Use the **Sources** button to show/hide the visual items in the classroom. The below figure shows the Sources list for a classroom that contains two video feeds and a presentation. You can view all of them at once in the classroom, or hide some/all of them as needed.

• If the video has closed captions, the **CC** button is active and clicking it presents a pop-up box with captioning options. There is a toggle for turning the captions on or off, and a variety of formatting options for the captions, to serve your viewing needs. These are listed below the figure.
The **CC toggle** turns the captions on and off.

**Font size** allows you to make the text bigger or smaller as needed.

**Contrast** allows you to select the text-to-background contrast needed to clearly read the caption text.

**Location** allows you to move the caption box to the top, middle, or bottom of the screen.

**Alignment** changes the justification of the text in the caption box, using left, centered, or right justification options.

The **Settings button** provides playback quality and speed controls. It looks like a gear, and when clicked presents a popup containing **Quality** and **Speed** options described below the figure.
• **Click in the Quality box** to change from Auto (the default) to either high-quality or low-bandwidth playback. If your network connection is a problem, you can switch to lower quality playback (or switch back to higher definition if applicable).

• **Click in the Speed box** to change the speed of playback. You can playback the video at .5 (half) speed up to 2x speed, or anywhere in between, in .25 intervals as needed.

• The **media layout button** allows you to change how the media items are displayed, viewing a single feed maximized with others in a thumbnail, or with all items at equal size.

![Media Layout Example](image)

Click through each option to see which layout works best for you. Keep in mind you can also use the **Sources** button to change which media feeds are being shown or hidden.

• The maximize or "full screen" icon appears in the top right corner of each media panel in the classroom. It allows you to view that media feed in full-screen mode.

  Press the **ESC** key to exit out of full-screen mode.
